

RVS Master™ Gun Treatment

Application Instructions

- RVS Master™ Gun Treatment is a revolutionary new product that will deliver huge improvements to your firearm. RVS Master™ will form a new “slippery” nano-ceramic surface inside your weapon’s barrel, reducing friction and heat. The results: increased range, improved accuracy, less heat. Corrosion is also reduced – ceramic doesn’t rust!
- One RVS Master™ Gun Treatment can be used to treat between 2-4 handguns, two single-barrel rifles or one dual-barrel shotgun.

Treatment Procedure

Note: Do not skip any of the steps in the following procedure. Doing so can significantly diminish your results

Shake Bottle well until there is no more residue on bottom of bottle

Remove the regular cap from the RVS Master™ bottle and attach the spray nozzle (included)

Take your firearm apart and spray all metal parts inside the receiver. Most importantly, spray the inside of the barrel from the end closest to the receiver

Re-assemble your gun and fire 10-15 shots in a semi-rapid fashion

4 Repeat Steps 1-3

Repeat steps 1-3 until the appropriate amount of RVS Master™ compound is used up: For handguns – between 1/4 and 1/2 of the bottle, depending on condition.

For rifles – 1/2 bottle per barrel

Note: after treatment, the firing characteristics of your firearm may continue to change and improve over a period of time; this is normal

Storage and safety instructions

Store at temperatures below +40 °C (105 °F).

In case of skin contact, wash with lukewarm water and soap. If the product gets in your eyes, it may cause irritation – flush with water and consult a doctor if the irritation continues. If the product is swallowed, flush the mouth with water and consult a doctor. Do not induce vomiting!

Keep product out of reach of children.
